

Digital Color Printer CP 8000DW

Frameless photos in outstanding picture quality on heavy photo paper in as little as 15 seconds. The CP 8000 DW is the fastest printer in its class. This is possible thanks to the new roll-type paper feed and 16 MB memory plus 16 MB buffer. Thus, it stores the second photo while it is printing the first. A CIC chip integrated into the ink sheet cassette with all the important data on the paper and color slides used ensures exact color control.
